

# Village of Palos Park

Utility Department

## Notice Of Work

### Sanitary Sewer Cleaning and Televising

The Village of Palos Park has contracted Visu-Sewer to clean and televise the sanitary sewer lines and inspection manholes in your area. This work is being conducted in accordance with the Chicago Metropolitan Water Reclamation's storm water infiltration reduction requirement.

Televising consists of a robotic camera inspecting the interior of the sanitary pipes looking for deficiencies that will eventually be repaired once the area has been completely televised and evaluated.

Prior to the televising the sewer mains will need to be cleaned with a high-power jetting system to remove debris and build up and grease from the line so the robot can move accordingly. Residents living in the work area may experience the following from the jetting process:

- The vacuum created during the cleaning may cause toilets, drains, bathtubs and sinks to surge air.
- Please make sure your lower-level basement and first floor toilet lids are shut to avoid the air surge containing water to the toilet and floor drain.

This work scheduled to begin the **week of March 24<sup>th</sup>, 2025**, and will take ten working days to complete, weather depending.

Please feel free to contact the Palos Park Utility Department with questions or concerns that you may have regarding the project at 708-671-3722.
